Seitz T series depth filter sheets were developed for coarse and clarifying filtration of many fluids in the food and beverage industry.

**Description**

The “T” stands for technical because these filter sheets are designed for general industrial filtration duties. T 120 through T 950 are specifically designed for clarifying filtration. With their positive ZETA potential, these depth filters contain a high adsorption capacity. T 1000 through T 5500 have no ZETA potential. This range of the T series is characterized by its open structure and is well suited for filtration of high suspended solids and viscous applications.

From the selection and quality control of raw materials to application of the latest production technologies, the T series filter sheets meet the highest quality standards.

<table>
<thead>
<tr>
<th>Features</th>
<th>Benefits</th>
</tr>
</thead>
</table>
| Homogenous and consistent media, available in multiple grades | Suitable for a variety of applications  
Proven and reliable performance |
| Reduced density and high porosity media with low filtration resistance | Economical filtration  
High particle holding capacity resulting in long filtration cycles and high throughputs  
Suitable for filtration of viscous materials, retention of gel particles or coarse dispersed substances at low differential pressures |
| Each individual filter sheet is laser etched with the sheet grade, batch number and production date. | Full traceability |

**Main Constituents**

- T 120, T 500, T 750, T 950, cellulose, perlite
- T 1000, T 1500, T 2100, T 3500
- T 2600, T 5500, cellulose

**Applications**

- T 120, T 500, T 750, T 950, Coarse filtration of rennet  
Coarse clarification of rapeseed and wheat germ oil  
Fine filtration of sugar syrup
- T 1000, Wine clarification  
Coarse clarification of natural extracts
- T 1500, Coarse filtration of sugar syrup
- T 2100, Coarse filtration of honey and edible oils
- T 3500, Sugar syrup clarification  
Particle removal in spirits  
Clarification of enzyme solutions

**Relative Retention Rating**

1 Effective removal performance of filter sheets is dependent on process conditions.

**Quality**

- Filter sheets produced in a controlled environment
- Manufactured according to ISO 9001:2008 certified Quality Management System

**Food Contact Compliance**

Please refer to the Pall website www.pall.com/foodandbev for a Declaration of Compliance to specific National Legislation and/or Regional Regulatory requirements for food contact use.
These figures have been determined in accordance with in-house test methods and the methods of the Technical/Analytical Work Group within the European Depth Filtration Association.

2The permeability was measured under test conditions with clean water at 20 °C (68 °F) and Δp of 1 bar (14.5 psi).

### Characterization

*The actual time required may vary as a function of the process conditions.

### Filtration Guidelines

Please contact Pall for recommendations on your specific filtration process as results may vary by product, pre-filtration and filtration conditions.

For additional operating guidelines, including rinsing of sheets prior to use, please refer to instructions provided by Pall.

### Available Sheet Formats

**Rectangular Sheets**

- 400 mm x 400 mm (15.8” x 15.8”)
- 600 mm x 612 mm (23.6” x 24.1”)

**Folded Sheets**

- 1003 mm x 2016 mm (39.5” x 79.3”)
- 1205 mm x 2420 mm (47.4” x 95.3”)

Other formats are available on request.

Seitz T series filter sheets are also available in SUPRAdisc™ module configurations. Please contact Pall.

---

### Regeneration

T series filter sheets may be rinsed with clean water (in the forward or reverse direction) to increase throughput and to optimize economic efficiency. Optimal regeneration of filter sheets installed in a plate and frame filter may be achieved with serial rinses of warm water followed by hot water. An example protocol is shown below.

1. Rinse with warm water (60 °C / 140 °F) for 15 minutes
2. Rinse with hot water (70 – 80 °C / 158 – 176 °F) for 8 – 10 minutes

The rinse flow rate should be equivalent to the filtration flow rate with a back pressure of 0.5 – 1 bar (7.2 – 14.5 psi).

*When rinsing in the reverse flow direction it is critical to control particulate and microbial levels in the rinse water so that the filtrate side of the sheet is not contaminated. Water used for reverse flow flushes should be particle-free, and if the filter will not be sterilized prior to re-use the water should be free of microbes. Backwashing should be in a diagonal direction from outlet to inlet in a plate and frame filter.
